SUMMARY

Backend Engineer specializing in Go, payment systems, and high-scale e-commerce platforms. Experienced in building production services handling large order volumes, integrating payment providers, migrating legacy systems, and improving reliability through event-driven architecture, observability, and cloud-native operations.

EDUCATION

Bachelor of Information Technology, Software Engineering

University of Science, VNUHCM

2020–2024

Ho Chi Minh City, Vietnam

GPA: 3.35/4.0, Good Degree Classification

TECHNICAL SKILLS

Programming Languages: Go, JavaScript/TypeScript, Java

Architecture & Fundamentals: Data Structures & Algorithms, System Design, Clean Architecture, Microservices, CQRS, Event Sourcing, Event-Driven Architecture, Concurrency Control

Data & Messaging: SQL/NoSQL databases, Redis, Elasticsearch, Kafka, Debezium CDC

Cloud & Observability: AWS, GCP, Docker, Kubernetes, Terraform, ArgoCD, OpenTelemetry, Prometheus, Grafana

EXPERIENCE

Backend Engineer

Company: Hasaki Beauty and Spa

Apr 2025 - Present

Ho Chi Minh, Vietnam

Tech: Go, Docker, Kafka, Debezium, MySQL, Redis, ELK Stack, Grafana/Prometheus, Vault, Jenkins, ArgoCD, Third-party APIs

- Built and maintained Go services for Hasaki's high-volume order management system, handling 60K–100K daily orders and up to 300K orders on peak days across order, shipment, return, payment, warranty, and invoice flows.
- Independently designed and implemented US-market POS/Online payment systems utilizing **Event Sourcing to guarantee 100% audit trail compliance** and reliable transaction state management across semi-integrated terminal (Fiserv/Ingenico) and server-to-server (Stripe, Fiserv Valuelink) flows.
- Rebuilt legacy PHP Order and Invoice services into Go services, migrating 30M+ records with Debezium CDC and fallback jobs to minimize data loss risk during rollout.
- Improved order/shipment processing reliability by adding optimistic locking, distributed locks, retries, and timeouts, reducing duplicate/failed transaction incidents in critical flows.
- Built Kafka-based data pipelines from MySQL Outbox Events to Elasticsearch, improving cache consistency and reducing key query latency to under 100ms.
- Integrated Amazon order fulfillment and FBA return sync, optimizing queue polling and rate-limit handling to eliminate API throttling.
- Co-developed a payment service integrating ZaloPay, VNPAY, Techcombank, and an internal wallet, supporting split payments, partial refunds, and strict accounting validation.
- Protected customer data across MySQL, Elasticsearch, and Redis by applying masking and encryption for sensitive fields, ensuring compliance with data privacy standards.
- Built notification workflows for Zalo, Telegram, Discord, and internal chat to send customer updates, operational alerts, and production incident notifications.

- Added OpenTelemetry tracing for logistics and marketplace integrations, making production issues easier to detect and debug.

Backend Engineer

May 2024 - Mar 2025

Company: Avian Solutions PTE. LTD.

Ho Chi Minh, Vietnam

Tech: NestJS, Redis, RabbitMQ, Docker, AWS, MongoDB, EKS, ArgoCD, Bitbucket Pipeline

- Deployed and maintained the development environment on AWS EKS, including networking setup and node auto-scaling with Karpenter.
- Optimized infrastructure cost by using EC2 Instance Store for temporary workloads such as caching, FFmpeg processing, and Excel report exports.
- Set up observability with Grafana, Jaeger, and OpenTelemetry, reducing issue detection time by 40% and enabling alerts for bugs via Slack and major incidents via email.
- Developed backend modules for aviation workflows with complex business rules, including service packages, partner operations, aircraft price verification, and calendar scheduling.
- Built background job processing with BullMQ and Redis, and integrated Firebase for real-time messaging.
- Implemented email delivery and event processing with Amazon SES and SQS, handling read/open webhooks and optimized polling to reduce read throughput for email engagement tracking.

DevOps Intern

Dec 2023 - May 2024

Company: Tech JDI CO. LTD.

Ho Chi Minh, Vietnam

Tech: AWS, Jenkins, Ansible, NodeJS

- Set up CI/CD pipelines and deployed staging and production environments for multiple outsourced projects.
- Managed cloud infrastructure for backend and frontend services using AWS EC2, CloudWatch, Jenkins, and Amplify.
- Supported backend development and third-party integrations, including Salesforce API integration for the NLS project.

CERTIFICATIONS & PROFILES

- **TOEIC 4 Skills Certificate, 2024:** Overall 1000/1390 (Listening: 430, Reading: 270, Speaking: 140, Writing: 160)
- **AWS Certified Solutions Architect – Associate (In progress, target exam: Sep 2026)**
- **LeetCode Profile** – [View profile](#)
